

Help Desk Simulator Demo Rubric

TEACHER USE

1sw/wk4-tech-support-it

Score the Day 5 team demo on three dimensions, 4 points each, 12 points total. Circle the descriptor that fits what the team actually demonstrated. The demo runs 3 minutes and covers the scenario, the steps, why that order, the career, and the Powerskill.

Team: _____ Period: _____ Total: _____ / 12 Teacher initials: _____ Date: _____

DIMENSION	1 BEGINNING (1 PT)	2 DEVELOPING (2 PTS)	3 PROFICIENT (3 PTS)	4 MASTERY (4 PTS)
Logical Troubleshooting Sequence (the scenario, the steps, and why that order)	The scenario is named but the steps are not shown running, or fewer than three steps work on the device.	Three steps run on the micro:bit. The team reads them out without saying why that order.	Three steps run and the team gives a reason for the order, but the reason is general, such as "it made sense to us."	Three steps run in order on the micro:bit and the team names why the first step is first, using cost, time, or how likely the cause is.
Certification and Education Path (the IT support career that would use this tool, and the training it takes)	No career named, or a career that has nothing to do with IT support.	An IT support career is named with no training path attached.	An IT support career is named with a training path, but the path is vague, such as "you need school."	A specific IT support career is named with the training that gets you there: a certification, an associate degree, or a bachelor's degree, with the time or cost from the week's own worksheet.
Transferable Skills (the Powerskill the build required and where else it applies)	No Powerskill named, or a skill that does not match the work the team actually did.	A Powerskill is named but not tied to anything the team did while building or testing.	A Powerskill is named and tied to a moment in the build, but the team does not say where else it is used.	A Powerskill is named, tied to a specific moment in the build or the role-play, and connected to at least one job outside IT support.

Scoring notes. Record the total as the week's summative score. Post the running totals where the class can see them so every team knows its score before the period ends. A team that scores 1 on Logical Troubleshooting Sequence because the device did not run gets a second attempt in the simulator before the score is entered, since the dimension measures the sequence, not the hardware.

Reteach triggers

- More than a third of teams score 1 or 2 on Certification and Education Path: the Day 2 worksheet did not transfer. Reopen it during the Day 5 favorites activity and require the education field before a student favorites a career.
- More than a third score 1 or 2 on Transferable Skills: name the Powerskill out loud during the next build day, at the moment the class is using it, instead of asking for it at the end.
