

Phishing Red-Flag Checklist

NAME _____ DATE _____ PERIOD _____

You are the cybersecurity analyst. Use this sheet while you work the inbox. Tick a flag every time you spot it.

The Five Red Flags

- ☐ **Flag 1. Strange sender address.** Letters are swapped, or extra words are added. security@bankofamerica.com is not bankofamerica.com.
- ☐ **Flag 2. Urgent language.** "Act in 24 hours or your account will be deleted."
- ☐ **Flag 3. Asks for private information.** Your ID number, your card number, your birth date, your password.
- ☐ **Flag 4. Suspicious link or attachment.** The words say Netflix. Hover the link and the real address says streaming-update-alert-44.com.
- ☐ **Flag 5. Spelling or grammar mistakes.** "Dear Valued costumer, your account have been locked."

Mark Each Email

Write an X under every flag the email triggers. Then circle Safe or Spoofed. An email with no flags is safe. Not every email in this inbox is a trap.

EMAIL	FLAG 1	FLAG 2	FLAG 3	FLAG 4	FLAG 5	MY DECISION
1						Safe / Spoofed
2						Safe / Spoofed
3						Safe / Spoofed
4						Safe / Spoofed
5						Safe / Spoofed
6						Safe / Spoofed
7						Safe / Spoofed

Write Your Reasoning

An analyst never says only "spoofed." Name the decision, then name the flag that produced it. Use this frame in your workbook box:

This email is _____ because the _____ shows _____ .

Hardest email to call: number _____. Write your reasoning here.
