

Robots for Crayons Presentation Rubric

TEACHER USE

1sw/wk1-robotics-manufacturing

Score the Day 5 team presentation on four criteria, 5 points each, 20 points total. Circle the descriptor that fits what the team actually presented.

Team: _____ Period: _____ Total: _____ / 20 Teacher initials: _____ Date: _____

CRITERION	1 BEGINNING (2 PTS OR FEWER)	2 DEVELOPING (3 PTS)	3 PROFICIENT (4 PTS)	4 MASTERY (5 PTS)
Problem Diagnosis (the two problems, named and explained)	One fault named, or the two faults are blended into a single problem.	Both faults named. Explanations stay general, such as "the robot was broken."	Both faults named and explained, but at least one explanation rests on a guess instead of a clue.	Both faults named as Color Confusion and Slowpoke Robot, each explained with a specific clue from the shift notes or the machine reference page.
Solution Choice and Reasoning (the solution chosen for each and why)	A solution for only one fault, or a solution that does not match the fault.	A solution named for both faults with little or no reasoning.	A solution named per fault with a reason, but no other idea is compared against it.	A solution named per fault, plus which idea it beat and why, using a reason a factory would accept: cost, downtime, or safety.
Repair Plan Detail (steps, tools or adjustments, time estimate, effect on production)	One part present, or steps listed with no tools, no time, and no production effect.	Two or three parts present. The plan could not be handed to a technician and followed.	All four parts present, but one is thin or is given for only one of the two faults.	All four parts present for both faults: ordered steps, named tools or adjustments, a time estimate, and a stated effect on production.
Career Connection and Delivery (one Manufacturing career the team would pursue, presented in 2 minutes)	No Manufacturing career named, or the presentation does not reach the audience.	A career named but not connected to the plan, or one or two students carry the whole presentation.	A specific Hat named and tied to the work. One member does not speak, or the team runs long.	A specific Manufacturing Hat named and tied to work the team just did. Every member speaks, the team stays inside 2 minutes, and the audience can follow the plan.

Scoring notes. Record the total as the week's summative score. A team that scores 1 or 2 on Repair Plan Detail rewrites the plan table on FYF p. 203 before the score is entered, because that table is the artifact the criterion measures.

Reteach triggers

- More than a third of teams score 1 or 2 on Problem Diagnosis: reteach reading the shift notes for evidence before the next case activity.
- More than a third score 1 or 2 on Career Connection and Delivery: build 60 seconds of rehearsal time into the next presentation day.
