

# From Wireframe to Wow

**Design an app before anyone writes code.**

College and Career Exploration · Week 3 · Day 3

Bring your Find Your Future workbook (open to p. 30), a pencil, and your phone-sized imagination. No Chromebook today.

# As you enter

**Think of the app you use most on your phone.  
How many taps does it take to do the main thing you use it  
for? Where is the menu button?**

## **Say it like this**

In \_\_\_\_\_ it takes \_\_\_\_\_ taps to \_\_\_\_\_. The menu is \_\_\_\_\_.

Write it in your notebook. Two people share.

# Today you will

- 1 Choose one of three app briefs and plan it on sticky notes (p. 30).
- 2 Draw four screens with the wireframe symbols: Home, Main Menu, Action, Success (pp. 31-32).
- 3 Test your screens with a partner and answer their three questions (p. 33).
- 4 Make at least 2 improvements and star them. Turn in the packet.

Word of the day: wireframe. A quick sketch that shows where buttons, text, and pictures go.

# Choose your app

Find Your Future p. 30 · Step 1 · Check one box

**Find Your Future**  
**p. 30**

## **Pick one**

Food Connection  
Stress-Less  
Passion Project

You have 3 minutes. Do not  
trade later.

**Find Your Future**  
**p. 30**

# Plan your app

Find Your Future p. 30 · Step 2 · Sticky notes

Find Your Future  
p. 30

**Name** What is your app called?

**User** Who is it for? Be specific: a 7th grader who forgets homework, a restaurant manager at closing time.

**Does** 2 or 3 features that make it useful or fun. One per sticky note.

5 minutes · Voice 0 · Stick the notes on p. 30

# Wireframe symbols

Find Your Future p. 31 · Step 3

**Find Your Future**  
**p. 31**

## **Every app needs**

- 1 Home screen
- 2 Main Menu
- 3 Action screen
- 4 Success screen

Box with an X = picture or video. Lines = text. Rectangle or oval = button. Three stacked lines = menu.

Boxes and labels, not art. A designer can read your screen in five seconds.

# Draw your four screens

Find Your Future pp. 31-32 · 17 minutes

Find Your Future  
p. 31

## Check yourself

Minute 8: Home and Main Menu are boxed and labeled.  
Minute 18: Action shows what the user did; Success shows what happened next.

## You are done when

all four screens have labels, a first-time user could find the next button on each one, and Success is not a copy of Home.

**Finished early? Add a fifth screen (settings, profile, or search) and write which screen it connects to.**

Voice 0 · Template printouts at the front if you want the frame drawn for you

# Think, pair, share: test your app

Find Your Future p. 33 · Step 4 · Trade workbooks

## Think

30 seconds, silent. Read your partner's four screens in order. Do not explain your own yet.

## Pair

Partner A: 30 seconds. Partner B: 30 seconds.  
Answer the three questions from p. 33 about the OTHER person's app.

## Share

Two pairs tell the class one confusion they found.  
Not a compliment.

**Find Your Future**  
**p. 33**

The three questions, p. 33

## Say it like this

On Screen \_\_\_\_ I did not know where to click next.

Your Success screen tells the user \_\_\_\_, but it does not tell them \_\_\_\_.

# Improve your design

Find Your Future p. 33 · Step 5 · At least 2 changes

Find Your Future  
p. 33

Find Your Future  
p. 33

## Star each change

Draw a star next to every improvement and write one line: what your partner said, and what you changed. Two stars minimum. That line is what gets graded.

10 minutes · Voice 0

# Turn in your packet

Major 1 · 16 points · App Design Packet

**1** App plan (p. 30 with your sticky notes)

**2** Four labeled screens (pp. 31-32)

**3** Partner walkthrough notes and 2 starred improvements (p. 33)
