

SFX Texture Concept and Lab Brief

NAME _____ DATE _____ PERIOD _____

1. Read the design challenge

Create a texture transformation for a fictional character who touches an ancient object. Your design must use one main texture and show how an SFX artist plans before building.

Safety boundary: Build only on the teacher-approved practice surface. Never place classroom adhesive, paint, food, seeds, pasta, salt, or craft material on anyone's skin, face, hair, or clothing.

2. Record what you learned

What is a makeup prosthetic, and what does it change?

Why do texture and layering make an effect more believable?

3. Choose the texture

MAIN TEXTURE	VISUAL CLUE	MY CHOICE
Smooth or scaled	repeating and overlapping	☐
Rough or cracked	broken and uneven	☐
Layered or wrinkled	folded and organic	☐
Rock or geode	hard, grainy, or sparkling	☐

Primary texture: _____

Optional second texture: _____

4. Build the concept card

Character description - 2 or 3 sentences

Color palette - name 2 or 3 colors and the job each color does

Choose one equal build route:

- ☐ **Dry relief model:** cardstock, tissue, foil, paper shapes, yarn, or other teacher-approved dry material on a flat practice board
- ☐ **Digital texture model:** Canva, Adobe Express, or another approved tool with visible layers and labels
- ☐ **Optional adhesive lab:** only when the teacher has approved the product, surface, ventilation, cleanup, and allergy/SDS plan

Materials or digital tools I will use: _____

How each material or layer creates my texture:

5. Sketch the texture map

Label the main texture, optional second texture, three layers or material choices, and the direction the texture grows or spreads.

6. Build, test, and record

BUILD CHECKS

- ☐ The design is on the approved practice surface, not a person.
- ☐ The main texture is visible from three feet away.
- ☐ At least three pieces or digital layers overlap.
- ☐ The design follows the texture map.
- ☐ Loose materials and tools are contained and the work area is clean.

EVIDENCE SKETCH OR PHOTO NOTE

Draw the finished model or write the Canvas filename if you submitted a photo.

WHAT HAPPENED DURING THE TEST?

One part that held, aligned, or read clearly:

One part that moved, flattened, detached, or became hard to read:

One change I made during the build:
