

Fictional Patient Care Report and Safety Plan

NAME _____

DATE _____

PERIOD _____

Fictional Training Scenario Only

Do not include a real person's name or medical information. Record only what the Granite Ridge scenario states or what your team represented in the simulation.

1. Scene: Where is the fictional patient? What conditions affect the response?

2. Observed condition: What did the scenario say or show? Avoid diagnosing.

3. Simulated actions: What did your team represent with the sling and finger-splint model?

4. Reasoning: Why would limiting movement, checking comfort, communicating, and documenting matter?

5. Handoff: What facts would the next trained responder need?

Wilderness Complication Plan

Circle one: **severe thunderstorm** · **anxious patient** · **fast-moving stream**

SAFETY FIRST

- Thunder nearby: move toward an appropriate enclosed building or hard-topped vehicle; do not shelter under a tree or in a small open shelter.
- Fast or unknown-depth water: do not enter it. Communicate, seek an alternate route or higher ground, and wait for trained help.
- Anxious patient: communicate calmly, explain the plan, offer choices when possible, and do not make promises you cannot keep.

Our first action is

This protects the patient and team because

What we will communicate to dispatch or the next responder:

What could make us stop and reassess:

One alternative route or action:
