

Teach Through Play and Service Reflection

NAME _____

DATE _____

PERIOD _____

Plan from the FYF Brief

Start with FYF pp. 216-217. Design a fictional classroom activity that practices the supplied gross-motor target and the supplied fine-motor target or an access-equivalent option.

Theme and activity name: _____

Child-friendly learning goal:

Materials:

STEP	WHAT THE CHILD DOES	TARGET SKILL OR PURPOSE
First		
Next		
Then		

One safety or access support:

Language help: gross motor = motricidad gruesa | fine motor = motricidad fina | access = acceso | revision = revisión

Map the Activity

Label materials, where the child moves, where the child cuts, tears, traces, or creates, and one safety or access support.

How this map supports both target skills or an access-equivalent route:

Test, Revise, and Connect to Service

Route used: partner test / tabletop walk-through / teacher conference / individual simulation

What was clear immediately:

One point of confusion:

Two revisions and why each helps:

Use a real, planned, or supplied scenario. Personal service disclosure is never required.

Supplied scenario: A volunteer helps at a library homework table. The volunteer listens to a third grader read directions, breaks the task into smaller steps, asks the student to explain the next step, and does not complete the work for the student.

One community benefit and one skill the volunteer develops:

How that skill transfers to two careers:

Complete frame: Service benefits the community by **[result]**. The volunteer practices **[skill]**. In a **[career 1]** career, the skill helps **[use]**. In a **[career 2]** career, it helps **[different use]**.

Do not score balance, cutting performance, disability, artistry, partner attendance, or private volunteer history.
