

Spot the Problem — Fictional Visual Observation Log

NAME _____

DATE _____

PERIOD _____

Observation Boundary

This is a fictional image-analysis exercise. Do not inspect your home, touch wiring, climb, handle mold, use tools, price a repair, or decide whether someone should buy a property.

For each image:

1. **I observe:** visible evidence only.
2. **This could indicate:** one cautious possibility.
3. **The image cannot prove:** an evidence limit.
4. **Next qualified role:** who should evaluate it.

“No obvious concern in this image” is valid. It does not prove that the whole system is safe.

Model language:

Image 1

Area or system checked: _____

I observe:

This could indicate:

Evidence limit / confidence:

Next qualified role and why:

Image 2

Area or system checked: _____

I observe:

This could indicate:

Evidence limit / confidence:

Next qualified role and why:

Image 3

Area or system checked: _____

I observe:

This could indicate:

Evidence limit / confidence:

Next qualified role and why:

Image 4

Area or system checked: _____

I observe:

This could indicate:

Evidence limit / confidence:

Next qualified role and why:

Image 5

Area or system checked: _____

I observe:

This could indicate:

Evidence limit / confidence:

Next qualified role and why:

Regular and Thermal Image Comparison

Visible temperature pattern, including hotter/cooler area:

One possibility the pattern could help a professional investigate:

Evidence needed before a conclusion:

Why a thermal difference does not prove a leak, missing insulation, or air loss:
