

Drone Systems Test and Iteration

NAME _____

DATE _____

PERIOD _____

Fictional inspection mission

Inspect a marked equipment panel and return one usable observation without touching the target or crossing the boundary.

Route: [] Live indoor microdrone [] Simulator [] Tabletop

Roles: operator/mover · spotter/boundary checker · evidence logger · communication checker

Success criteria

- ☐ Stay inside the assigned boundary
- ☐ Reach the observation position without target contact
- ☐ Record one usable observation
- ☐ Use goal, action, result, stop/revise communication
- ☐ Stop immediately when a safety or control condition fails

Trial 1

Goal and success criterion:

Main variable being tested: _____

Result:

Breakdown or limitation:

One-variable revision before Trial 2:

Trial 2

Goal and success criterion:

Main variable being tested: _____

Result:

Evidence compared with Trial 1:

Breakdown or limitation:

One-variable revision before Trial 3:

Trial 3

Goal and success criterion:

Main variable being tested: _____

Result:

Evidence compared with Trials 1-2:

Final breakdown or limitation:

Next test:

Individual iteration note

Variable changed:

Evidence that performance improved, declined, or stayed mixed:

Next test and the evidence it would produce:

One transferable skill: _____

Occupation 1 and how it uses the skill:

Occupation 2 and how it uses the skill:

Tradeoff decision

A team can make another fast run or pause to investigate why the target evidence is blurry.

Advantage of another fast run:

Advantage of pausing to investigate:

My next action:

Run-log evidence that supports it:

Transferable skill and a second occupation that uses it:

Done when

- ☐ Three trials or two trials plus a written third
- ☐ One main variable changed at a time
- ☐ Result and evidence recorded
- ☐ Individual iteration note
- ☐ Skill connected to two occupations
