

Truck Evidence and Priority

NAME _____

DATE _____

PERIOD _____

Evidence boundary

A dashboard light alerts you to a system. A code reader narrows the investigation. Neither proves the failed part, the repair, or whether a vehicle is safe to drive.

Dashboard-light boundary in my words:

Code-reader boundary in my words:

MODEL

Clue: temperature light is on. Possible system concern: engine cooling or temperature. Not proved: the exact failed part. Still needed: trained inspection and approved vehicle information.

One reason a clue and a conclusion must stay separate:

Issue 1 and Issue 2

ISSUE 1

Supplied clues: oil light on; code related to engine oil; oil looks dark; engine feels hotter than usual.

Two exact clues:

Broad possible system concern:

One conclusion these clues do not prove:

Inspection or approved information still needed:

ISSUE 2

Supplied clues: battery light on; code related to battery; truck struggles to start; interior lights are dim.

Two exact clues:

Broad possible system concern:

One conclusion not proved and one next evidence need:

Issue 3 and Issue 4

ISSUE 3

Supplied clues: temperature light on; code for engine temperature; engine very hot; steam under hood; radiator fan runs constantly.

Two exact clues:

Broad possible system concern:

One conclusion not proved and one next evidence need:

ISSUE 4

Supplied clues: tire-pressure light on; code related to tire pressure; tires look slightly flat; truck pulls to one side; tires feel soft.

Two exact clues:

Broad possible system concern:

One conclusion not proved and one next evidence need:

Priority decision

Rank 1 means the quickest stop-and-inspect response. Rank all four; a lower rank does not mean safe to ignore.

ISSUE	MY RANK, 1-4	EVIDENCE FOR THE RANK
1		
2		
3		
4		

Top case 1: _____

Why it needs quick action:

Top case 2: _____

Why it needs quick action:

One case I ranked lower and why it still needs service:

Safe next-step plan

For each top case, write a broad authorized response. Do not prescribe a part, tool setting, or repair.

TOP CASE 1

Stop or protect:

Notify or hand off to:

Evidence the trained person still needs:

TOP CASE 2

Stop or protect:

Notify or hand off to:

Evidence the trained person still needs:

Exit response

Correct: “The code already told us the broken part, so we can skip the inspection.” Use one clue, one limit, and one safe next step.
