

Family Fun Pass Data Analysis

NAME

DATE

PERIOD

Workbook Scenario and Data Limit

The Family Fun Pass, preferences, campaign results, and quotes are fictional workbook data. They support a classroom decision—not a real launch or universal claim about age groups.

AUDIENCE PREFERENCE BY AGE (%)

AGE	SOCIAL ADS	INFLUENCERS	IN-STORE	EMAIL	VIDEO ADS
25-34	65	45	40	38	60
35-49	50	30	55	52	48
50+	32	18	70	66	35

PAST CAMPAIGN PERFORMANCE

CAMPAIGN	CLICKS	SALES	ENGAGEMENT
Social Media Ads	12,500	1,200	High
Influencer Campaign	9,800	1,450	Very High
In-Store Promotion	4,200	1,100	Medium
Email Campaign	6,000	950	Medium
Video Ads	10,200	1,050	High

One pattern and one limitation:

Read the Three Evidence Types

Focus-group quotes include trust in recommendations, emails being lost unless interesting, short videos catching attention, family deals simplifying planning, and in-store discovery.

What the preference table can answer:

What the past-performance table can answer:

What the quotes add—and cannot prove:

Compare Three Strategies

Strategy 1: Two supporting values/quotes:

Strength and weakness:

Strategy 2: Two supporting values/quotes:

Strength and weakness:

Strategy 3: Two supporting values/quotes:

Strength and weakness:

Choose and Defend

Primary goal selected: awareness / clicks / sales / trust / broad age reach

Chosen strategy:

Three pieces of evidence, including at least two numbers:

Why the goal changes which number matters most:

Conflicting Evidence and Test Plan

One conflict in the data:

My decision rule for resolving it:

One small test and result I would measure next:

Individual Evidence Brief

Strategy, audience, goal, and key message:

Evidence-based reasoning:

One limitation and next data question:
