

CCE Project Routine Card

NAME _____ DATE _____ PERIOD _____

Use this card when a CCE task lasts more than one class, when you need to recover missed work, or when a source has facts you will use later. Keep the work in your engineering notebook, workbook, or teacher-designated digital folder. This card is a guide, not another assignment.

Plan > Do > Recover > Reflect

MOVE	ASK YOURSELF	RECORD
Plan	What is the evidence job? What do I already have?	One next action and when I will do it
Do	What part can I finish now?	The work, source, or checkpoint I completed
Recover	Was I absent, offline, blocked, or unfinished?	The exact page, person, or catch-up route I will use
Reflect	What helped? What got in the way?	One change I will make next time

Locate and Use Check

- ☐ I can locate the current CCE page, file, notebook entry, or workbook page.
- ☐ I can open it and point to the evidence I need.
- ☐ I can use that evidence in today's task.
- ☐ I know the recovery route if something is missing.

The check is about finding and using your work. Binder style, color coding, handwriting, and purchased supplies are not the score.

Career Evidence Notes

- Capture:** Write two or three useful facts in short phrases.
- Label:** Keep the source, date or data year, geography, and measure with the fact when they matter.
- Question:** Name one point of confusion, missing fact, or limit.
- Use:** Apply one fact to a comparison, design decision, explanation, or recommendation.

Example: Capture: Median pay is \$48,000. Label: BLS, U.S., May 2024, median annual wage. Question: Is the Dallas-area figure different? Use: I can compare the pay with the training time before recommending this route.

Remember: Notes earn their place when you use them.
